PACKAGING

Create a  
mineral  
bathing  
destination  
in your own  
backyard.

# CONVERT YOUR POOL TO MINERAL WATER.

## WHAT IS ENHANCED MINERAL ADDITIVE?

The idea of mineral bathing is a centuries old phenomenon and conjures up the idea of a luxurious experience, rejuvenation, relaxation and enhanced water quality.

By using Theralux Enhanced Mineral Additive, you are adding naturally occurring minerals to your swimming pool, or spa (Spa pack size available), allowing you to bathe in water that provides health and wellbeing benefits to you and your family. It is compatible with all types of sanitising systems so any pool or spa owner are free to enjoy the benefits of this miracle mineral.

The addition of Enhanced Mineral Additive will give the water a soft silky feel whilst moisturising and conditioning the bather. The minerals will naturally be absorbed through the skin to detoxify the body, relax the nervous system and provide relief to any muscular complaints. It also enhances the water's ability to absorb calcium and other minerals which cause cloudy water. The Enhanced Mineral Additive will also assist in maintaining better water balance and reduce pH fluctuation.

## DISCOVER HOW AFFORDABLE AND EASY IT IS.

Theralux Enhanced Mineral Additive is the easiest and most economical method of converting your pool into a mineral bathing oasis.

**Step 1** Simply test and balance your pool water as you have always done using the same sanitizer, keeping within the standard parameters as per Australian Standards (please refer to the table below).

Please note, if you are using a salt chlorinator you must maintain the TDS levels that are recommended by the products manufacturer. If you are using the Therachlor SMC chlorinator, please ensure your TDS is at least 4000ppm or above.

**Step 2** Once you are within the parameters and you have the correct TDS levels maintained, simply add in 6kg per 10,000 litres of Enhanced Mineral Additive and top up the minerals every 5 to 6 months using 3kg per 10,000 litres. It's that simple.

## DOSAGE RATES

Pool Volume	Dosage Rate (Initial Start up)	Dosage Rate (Maintenance / 6 monthly)
10,000	6kg	3kg
20,000	12kg	6kg
30,000	18kg	9kg
40,000	24kg	12kg
50,000	30kg	15kg
100,000	60kg	30kg

## WATER BALANCE PARAMETERS (AS PER AUSTRALIAN STANDARDS)

	Free chlorine	pH	Total Alkalinity	Calcium Hardness	Cyanuric Acid	TDS Level
<b>Theralux Ideal Range</b>	1.0 - 3.0	7.2 - 7.6	80 - 120	200 - 400	30 - 50	4000ppm TDS 2750ppm Sodium
<b>To raise</b>	Add a shock or increase the production on your salt chlorinator	Add Soda Ash (pH Up)	Add Sodium Bicarbonate (Alkalinity Up)	Add Calcium Chloride (Water Hardener)	Add Cyanuric Acid (Sunblock)	Add Sodium
<b>To reduce</b>	N/A	Add acid (Pool Acid or pH Down)	Add acid (Pool Acid or pH Down)	Dilute with fresh source water	Dilute with fresh source water	Dilute with fresh source water
